

### ABOUT US

We're a team of goal driven people that want you to ignite and power your business with software seamlessly. We offer our skillset to help you realize your business objectives, to complement your local team, or to develop your vision from scratch.

### SERVICES

We provide full-range software development solutions. This means that we adapt to our customers needs in every project we face.

From consulting-style interventions in already working teams, in order to bring new skills and points of view, and improve those teams workforce, to complete ready-to-use products in which we are in charge of every bit of development: requirements analysis, design, architecture, implementation, testing and deploy.

### CURRENT PROJECTS

- **2017** – JavaScript technology-upgrade project for an EEUU based robotics company. Working to migrate an existing robot-human mobile and web interface to Facebook React. Technology set: NodeJS, ReactJS, HTML5, CSS3.
- **2016/2017** – In charge of the Front-End products for an Argentinean medical software company in their latests mobile efforts. Development of a mobile hybrid app (iOS and Android) meant for tracking medical history, and administer and track progress of health treatments. This app is a modular product designed to be easily expanded, has an integrated chat to communicate professionals with patients, and interacts with several medical measure devices via third-party APIs. The product has a first version deployment planned for May 2017. Technology set: NodeJS, AngularJS, Cordova, HTML5, CSS3.
- **2016/2017** – Software-factory style development of a multi platform tool for an Argentinean communications software company. Analysis, design and implementation of a system for real-time recording and streaming audio and video from different devices used by technicians to the company central servers. Deployed as an independent nodeJS runtime box with his own control API, and currently in the late stage of development, this tool is meant to be used by one of the major cellular network providers of South America. Main skills: NodeJS, Javascript, Cordova, ffmpeg API.

## PAST PROJECTS

- **2016** – In charge of the post-mortem analysis of a commerce promotions hybrid app for an Argentinean company. In less than 10 weeks, took an undocumented, non-functional and broken product, and cleaned up and fixed it into a first MVP deploy to showcase for potential investors. Technology Set: NodeJS, AngularJS, Sails, Cordova, HTML5, CSS3.
- **2015/2016** – Augmented the work force of a Canadian based robotic company. Worked together with the local team on the development of a web app interface to control large-scale robot fleets. Technology Set: NodeJS, ReactJS, Webpack, HTML5, CSS3.
- **2015** – JavaScript UI upgrade project for an EEUU based robotics company. Working to improve an existing robot-human mobile interface with new functionalities, and a reworked look & feel. Technology set: NodeJS, Meteor, HTML5, CSS3.
- **2015** – Hired by an EEUU based Start-up to take charge of the development team. Worked on a mobile-first web app (iOS and Android) meant for tracking health treatments for patients with chronic illnesses. Technology Set: NodeJS, AngularJS, MongoDB, Ionic Framework, Cordova, HTML5, CSS3.
- **2013 / 2014** – Software-factory style development of a full-stack web app meant to maintain several lottery data corpus upon which complex statistical calculations were made. Technology Set: NodeJS, AngularJS, MongoDB, HTML5, CSS3.
